

JSON FUNDAMENTALS

Conventions and Terminology

What is JSON?

- JavaScript Object Notation
- Lightweight data-interchange format
- Based on a subset of JavaScript
- Easy to read and write
- Often used with AJAX
- Can be used with most modern languages

DataTypes

According to the spec, a JSON value can be one of the following:

- Object
- Array
- Number
- String
- Boolean: true / false
- null

JSON Syntax Rules

- Uses key/value pairs – {"firstName":"Sherlock"}
- Uses double quotes around KEY and VALUE
- Must use the specified data types
- File type is ".json"
- MIME type is "Application/json"
